

At JPeptics, quality and transparency are at the center of everything we do. We understand the importance of confidence when it comes to research materials, so we go above and beyond to ensure each vial meets the highest standards.

Independent Laboratory Testing

Each small batch of peptides is independently tested by **Freedom Diagnostics**, a U.S. based laboratory.

Every batch is analyzed for:

- **Identity** – confirmation that the peptide matches the stated structure.
- **Quantity** – verification of accurately measured amount per vial.
- **Purity** – assessment to confirm the purity and safety of the peptide.

Controlled Batch Sizes

To maintain the highest quality, our peptides come in **very small, controlled batches**. Each batch uses its own **unique cap color** that can be confirmed by the photo on the Certificate of Analysis (COA). We also **share the exact size** of each batch on each COA so you can be confident that the vials you receive come directly from this same batch.

Safety Assurance

Each vial is carefully **inspected and individually numbered on the bottom by hand**. Then the **batch number is handwritten, dated and signed** on your kit along with a **QR code to the COA**.

Our Commitment

By securing independent U.S. laboratory testing, limiting batch size and hand-verifying each vial, we aim to provide the research community with products that inspire confidence and reliability.

Sincerely,
